- Easily plan engagements to extend and develop your organization's expertise.

- Amend plans as your organizations cyber-security needs change

- Engage Mandiant analysts to help answer your toughest security questions at any time

The cyber security experts you need, when you need them

Confront cyber security's biggest challenge

There was estimated to be 2.7 million[1] unfilled cyber security positions at the end of 2021. Insufficient and underskilled staff increase team workload, leading to burnout, attrition and increased business risk. With security teams devoting so much time to acquiring cyber security expertise, critical activities such as strategic planning, threat hunting and skills training are often de-prioritized.

Rethink your approach to acquiring cyber security expertise. Instead of using budget to hire a single expert for one role, you could have ad hoc access to a diverse set of cyber security capabilities, skillsets and functions.

Expertise On Demand is a product agnostic annual subscription that extends your security operations capabilities and capacity by providing flexible access to a wide range of industry-recognized security expertise. The service provides you with access to experienced cyber security resources, threat intelligence and training led by elite security practitioners to help accelerate your response without burning out your existing staff.

Given Mandiant's unrivaled breadth and depth of cyber security and cyber intelligence experience and extensive portfolio of services, Mandiant is well positioned to be your trusted cyber security partner.
